The answers to these questions and many others, can be found in *A Guide to California's Freshwater Fishes* by Bob Madgic. This book offers students, anglers, and all others interested in the natural world comprehensive and detailed information on the fish species inhabiting the Golden State's rivers, streams, lakes, and reservoirs. Color illustrations of each fish species by artist William L. Crary accompany the text. Other illustrations include color photos of significant fish habitat throughout the state, and important maps and diagrams. This guidebook presents ways that fish can be grouped for identification and study purposes, a rationale on the ecological importance of native fish species and an identification of habitat conditions necessary for maintaining healthy fisheries. It contains a brief history of California fishes, beginning with the once abundant coldwater fishery native to the state, to the many introduced species brought to California. The impact of dams, reservoirs, and hatcheries is discussed, as well as the significance of governmental legislation such as the Federal Endangered Species Act. Information of recent activities and reports of fish biologists and governmental agencies can be found throughout this book. By way of summary, the author presents a stewardship agenda for preserving California's rich fish heritage. Bob Madgic received a BA from Amherst College, and MA and PhD degrees from Stanford University. After a career in education, he is now devoting his time to conservation issues and writing about his lifelong passions -- fishing and the outdoors. His first book, *Pursuing Wild Trout*, was published in 1998 (River Bend Books), and his articles appear regularly in *California Fly Fisher* as well as other magazines. This most recent book, *A Guide to California's Freshwater Fishes*, represents his ongoing commitment to informing the public on issues relating to native creatures, environmental preservation, and the world of nature.
