Pathobiology of the Endothelial Cell (P & S biomedical sciences symposia series) Hymie Nossel

Pathobiology of the Endothelial Cell presents the proceedings of the symposium on the "Pathobiology of the Endothelial Cell" held at Arden House, on the Harriman Campus of Columbia University on June 5-7, 1981. The book discusses the endothelial growth regulation; the stimulation of vascular cell growth by macrophage products; and the control of proliferation and differentiation of endothelial cells. The text also describes vessel wall growth control; the implications of angiogenesis in vitro for tumor biology; and the interactions and activation of coagulation proteases. Platelet adhesion and fibrinogen proteolysis; endothelial protein synthesis; prostaglandins, and endothelial cell-cell interactions are also considered. The book further tackles topics on vascular pathobiology. Biologists, pathologists, biochemists, hematologists, oncologists, immunologists, and microbiologists will find the text invaluable.
