**The Color of the Atmosphere With The Ocean Below: A History of NASA's Ocean Color Missions** Dr. James G. Acker

(Black and White) *The Color of the Atmosphere with the Ocean Below* is a comprehensive history of NASA's "ocean color" missions. Written by James Acker with funding from the NASA Science and History Divisions, this book covers the science, technology, and diverse scientific personalities that allowed NASA to successfully extract measurements of light from the ocean surface using satellite instruments. These data allowed observation and determination of the complex patterns of biological activity in the oceans, which are directly related to mankind's understanding and utilization of the oceans. This research has also helped define the role that oceans play in local and regional ecosystems, as well in the changing global climate system. The history is extensively footnoted and referenced, providing unique documentation of this successful sector of NASA's Earth science missions. It covers a broad range of oceanographic research to which these vital data have been applied, and explains many scientific aspects. The history was augmented by individual and group interviews of scientists and engineers involved in NASA's three primary ocean color missions. The interviews and documents describe how diligent efforts and collaborations of oceanographers, physicists, satellite and sensor technicians, computer programmers, government agencies, and private companies combined to surmount remarkable challenges both at sea and in space to make this critical oceanographic data accurate and useful. Augmented with anecdotal insights into the missions – what made them work, and the different pitfalls and surprises frequently imperiling their eventual success – the book presents a detailed history of NASA's leading contribution to the observations of ocean color from space. It will both inform and entertain readers interested in science, oceanography, and remote sensing of the Earth.

### **From reader reviews:**

#### **George Carter:**

Information is provisions for anyone to get better life, information currently can get by anyone in everywhere. The information can be a expertise or any news even restricted. What people must be consider when those information which is from the former life are hard to be find than now's taking seriously which one works to believe or which one the particular resource are convinced. If you obtain the unstable resource then you obtain it as your main information you will have huge disadvantage for you. All those possibilities will not happen within you if you take The Color of the Atmosphere With The Ocean Below: A History of NASA's Ocean Color Missions as the daily resource information.

#### **Larry Carvajal:**

Are you kind of active person, only have 10 or even 15 minute in your moment to upgrading your mind skill or thinking skill actually analytical thinking? Then you have problem with the book compared to can satisfy your short space of time to read it because all of this time you only find publication that need more time to be examine. The Color of the Atmosphere With The Ocean Below: A History of NASA's Ocean Color Missions can be your answer given it can be read by you actually who have those short spare time problems.

#### **Renee Chagnon:**

What is your hobby? Have you heard that will question when you got scholars? We believe that that problem was given by teacher on their students. Many kinds of hobby, Everybody has different hobby. And also you know that little person such as reading or as reading through become their hobby. You should know that reading is very important and also book as to be the thing. Book is important thing to include you knowledge, except your current teacher or lecturer. You get good news or update concerning something by book. Many kinds of books that can you choose to adopt be your object. One of them is actually The Color of the Atmosphere With The Ocean Below: A History of NASA's Ocean Color Missions.

#### **Lawrence Fox:**

A lot of people said that they feel weary when they reading a guide. They are directly felt the item when they get a half parts of the book. You can choose the actual book The Color of the Atmosphere With The Ocean Below: A History of NASA's Ocean Color Missions to make your current reading is interesting. Your current skill of reading skill is developing when you like reading. Try to choose straightforward book to make you enjoy to learn it and mingle the sensation about book and reading through especially. It is to be first opinion for you to like to open up a book and learn it. Beside that the publication The Color of the Atmosphere With The Ocean Below: A History of NASA's Ocean Color Missions can to be your brand new friend when you're experience alone and confuse in doing what must you're doing of their time.
