Histological Typing of Ovarian Tumours (WHO. World Health Organization. International Histological Classification of Tumours) Robert Scully

Although the histological typing of ovarian tumours is the focus of this volume, other aspects of investigation of a specimen of ovarian tumour are also important. Some of these aspects are mentioned in the text or illustrated. They include tumour grading, which is important prognostically and therapeutically for certain types of ovarian tumour, quantification of components in mixed tumours and evaluation of the stroma of certain tumours that are associated with endocrine function. Grading methodologies have varied from one tumour type to another and from one group of investigators to another for the same type of tumour. Because a standard internationally recognized grading methodology has not been established, no specific guidance is presented in this volume. Nevertheless, grading by any generally acceptable method should be incorporated in the diagnosis whenever appropriate. The clinical and pathological classification of the extent of tumour growth (staging) should be taken into account for the purposes of treatment and prognosis. The TNM/FIGO system is therefore included (p. 45).
Histological Classification of Ovarian Tumours
1 Surface Epithelial-Stromal Tumours
1.1 Serous tumours
1.1.1 Benign
1.1.1.1 Cystadenoma 8441/0
1.1.1.2 Papillary cystadenoma 8460/0
1.1.2 Surface papilloma 8461/0
1.1.3 Adenofibroma; cystadenofibroma 9014/0
1.2 Of borderline malignancy (of low malignant potential)
2.1.2.1 Cystic tumour 8442/1
2.1.2.2 Papillary cystic tumour 8462/1
2.1.2.3 Adenofibroma; cystadenofibroma 9014/1
